

I plan to spend more time on this topic creating a web site. I also plan to encourage the teachers at my program to check this out!

I've done successful PowerPoint shows with students and had requests to do websites. The websites I've been involved with require far more skills than Weebly. This is the first site I've seen that I believe offers a good experience for students with basic computer experience. Thanks!

i am excited to make my own website. Before i thought, in order to have an own website, i have to page for that. But now i will create my own world by weebly.

Did I miss the part where you told us what the URL will be for our newly created weebly site?

This was my favorite section so far. Very clear and for the first time I actually think I can create my own webpage. I always wanted to do it but never thought I would be able to. Weebly is exactly what I needed (simple and practical). I can't wait to get started.
THANK YOU!!

Weebly looks like a great way to create a website.
Thanks.

Great. I will definitely use!

This was a great presentation. I've been wanting to create a simple website to use with my students in the computer lab but just haven't had the time to find a site or spend the time figuring out the basics to get started. Your presentation did it all for me. Now I'm ready to go!

I have never tried to create a web site. It does look fairly easy. I like your informal style-it's reassuring that it can be made easy-for something sort of baffling as making a web site. Thanks

I have enjoyed attending this workshop in my own time at home. I found weebly nice and simple and feel that even my beginning level students might be able to contribute to a class website. Thanks!

Good info. Thanks!
