

My son bought me my first digital camera, and it was expensive with many features I still don't know how to use. Prices have come down! When you mentioned how to put the pictures on your pc, maybe you could tell us a little bit more about the converter. I bought one, but I searched and searched because I didn't know what it was called. The device I bought has a slot for any size cards, and it cost \$13. It's portable and I can use it anywhere. Next, please talk about bookmarks a little bit more. (You did ask for feedback) On the page How to share your album, a popup came up from IBM, and I never saw anything else. On the window Kodak Gallery get started there was no audio, I needed more audio direction. Just letting you know some of the questions I had. Also, I learned from you about Picasa--so much better than Kodak. Why did you choose Kodak? Thanks, I have

I thought this topic was great for for a novice computer user as well as someone new to digital photography. My interest in this topic was to see how basic it is so I could determine if I could recommend it to some of the teachers I support....it is! But I've been using digital cameras for years and I learned something too so it's not just for novices.

How about adding info on Sharing Albums because that's what most people do when they've created one?

In all honesty, I am pretty experienced with digital cameras. Not so many of the staff at Bootstrap; I will really appreciate your work here as a resource when staff ask for advice on digital cameras for their personal use or, for example, when a new off-site program starts up and has money to burn.

I had some experience with a digital camera so I wanted to move fast, yet not miss anything!

I like how you've really started from the basics. I was able to skip the first couple of sections and focus on the others. Thanks for breaking it down.

I really enjoyed it. Not knowing too much about digital photography, I found it very informative.

Digital photography presents a wealth of possibilities. Thanks for such a patient and detailed explanation.

I now know what to look for when purchasing a digital camera. Thank-you

I keep getting interrupted so spend much more time on it than needed.

A page of downloadable instructions would be very helpful!
