

I watched both videos. They were very informative, and your instructions were concise and easy to follow. I'm not an English major, but I think in bullet 5 under What is Tech Integration? maybe the word What should be Why. I don't know. (you asked for feedback.) Also, the DESE mentioned cell phones. One of my students wanted me to help her program her cell phone. Since I'm not in the 15-30 year old age group, I could not help her. Is there a generic list of instructions that could to apply to all cell phones? I don't even know how to send a text message to someone or how to open one sent to me. Could this be a topic for Emerging Technologies? I've taken a couple of workshops from you and your presentations have been fun and informative. Your step-by-step instructions are so helpful and nonthreatening for people who want to learn new things. Thank you for that. In my next life, I will have your patience! Most importantly, I love the talking dog; can you teach me how to do that? Thanks.

Well done. It is good to put this in context, and for us, DESE documentation is the definitive frame of reference.

I already was very familiar with what DOE considers Tech Integration to be. Perhaps this should be one of the answer choices for question 1 in this survey.

Very interesting to think about tech integration as \*anything\* that uses technology (e.g., cell phones) because I have long assumed tech integration is limited to computers and software. Thanks for the insights and also the documentation on ACLS site.

It was worthwhile to see what the DOE has determined Tech Integration to be. I'm both a Tech Coordinator and ESOL Instructor so I sit on both sides of the fence.

I really appreciated having this course grounded in what technology expectations are reflected in program monitoring. I am a technology coordinator as well as a teacher. I appreciate being reminded that teachers are expected to integrate technology and I am to support them. I sometimes feel as if those teachers who are not enthusiastic about technology think it is my responsibility to do their techno-planning for them.

I was looking for the videos and realized later that the forum is not the place to find them.

This was a good way to show us how it relates to our work at the sites and in classrooms. Also by seeing lists that include commonly used Tech (phones, cameras etc) you've relieved some stress.

Could it be done more quickly? I think so.
