

Making Sense of Fractions - Transcript

Math matters to your students, but it can sometimes be mystifying. As a teacher, you want to help them understand the world around them. But the time you spend helping them remember rules can seem wasted as they inevitably repeat the same mistaken ideas and procedures time and time again. It can sometimes feel like no matter what you say, it just doesn't stick.

It looks like you could benefit from one of our courses! Introducing SABES Center for Mathematics and Adult Numeracy.

Most students struggle with fractions, and most teachers struggle with alternative ways to teach them. Our Center provides professional development so that teachers can help adult learners see math as accessible and relevant to their lives.

Our [Making Sense of Fractions](#) course, for example, focuses on the many ways that teachers can understand fractions and operations with fractions. Who knew math could make so much sense? (Visit our [SABES course calendar](#) for more Mathematics and Numeracy PD Center offerings.

We invite you to learn more in any one of our SABES courses. [Visit our website](#), because your students are counting on you.

SABES PD Center for Mathematics and Adult Numeracy. Managed by Adult Numeracy Center at TERC.
